PROFILE

Software engineering student with a strong focus on frontend development. I enjoy building clean, responsive web interfaces and turning ideas into functional products using modern JavaScript frameworks. Currently strengthening my skills through hands-on projects and real-world practice.

EDUCATION

NIIT — Diploma in Software Engineering (2-Year Program)

2023 — 2025

Focused on software development fundamentals including programming, web development, databases, and modern software engineering practices.

PROJECTS

PanelVerse — Manga Reader Web App

React, Tailwind CSS, REST APIs

Built a manga reader web application with search, browse, and library features

Integrated external APIs to fetch and display real content

Designed a clean UI with animations and responsive layouts

Focused on reusable components and readable code structure.

Meal Planner — Meal Planner Web App

React, Tailwind CSS, FastAPI

Developed a full-stack meal planning application with backend authentication

Built an interactive calendar and weekly view for meal scheduling

Implemented drag-and-drop functionality for intuitive user experience

Designed REST API integration between frontend and backend

SKILLS

Frontend: React, JavaScript (ES6+), Tailwind CSS.

Backend (Basics): Python, FastAPI, REST APIs.

Tools: Git, GitHub, GitHub Actions.

Concepts: Responsive design, component-based architecture, API integration.

Currently Learning

Advanced React patterns

UI animations & interactions

Improving backend integration and app architecture.

LANGUAGES

English (Fluent).
